1. Applicant is advised that the article "Amorphous Zr-Al-TM(TM=Co, Ni, Cu) Alloys with Significant Supercooled Liquid Region of Over 100K" by Zhang et al. cited in the IDS, dated September, 2006 had not been considered by the Examiner since no copy of the reference was provided by applicant.

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over either US 5,647,921 to Odagawa et al. or US 4,768,458 to Arakawa et al.

Each of the prior art references substantially shows the invention as claimed except that they do not shows the stabilizing step for obtaining the viscosity of the bulk solidifying amorphous in the regime of about 0.1 to 10,000 poise.

However, since the puddle of the bulk solidifying amorphous alloy on the chill surface must be in a stable condition, it would have been obvious to obtain an appropriate viscosity of the casting alloy through a routine experimentation such that the injected melt will form a stable puddle. With respect to claims 4, 5, 11-15 and 20, it would have been obvious to obtain these process parameters through a routine experimentation for a specific alloy product to be cast. With respect to claims 17 and 18, those alloy compositions are deemed to be conventional (see, for example, US 4,148,669 to Tanner et al. and JP 2001-303,218).
